Soaring Eagle Academy is honored to be awarded a \$5,000 UPS Foundation grant.

The local UPS Chicago Area Consolidation Hub (CACH) in Hodgkins, has been very generous to Soaring Eagle Academy over the last few years and its latest recommendation to the UPS Foundation, continues to demonstrate their compassion for and commitment to our school mission, to provide our students with a safe and nurturing educational environment, that integrates learning and interaction within Developmental Language Models and DIR® relationship-based principles.

In June 2015, as a result of the generosity of the UPS Foundation, we purchased an additional Smart Board technology system, that brings our innovative curriculum to life in ways that support the different learning styles and developmental levels of our students. Smart Board technology in our classrooms, allows for experiential learning and multiple modalities when teaching. Many curriculum materials are Smart Board adapted to allow for integrated learning experiences for students.

Offering students many ways to learn information, express ideas, and demonstrate understanding, Smart Board technology ideally supports and makes our goal of reaching every type of learner a reality - - visual, auditory and kinesthetic - - by removing traditional learning barriers. They create opportunities for shared peer interactions and social problem solving, which are inherent and crucial parts of our

program as a whole. Multi-sensory experiences lead to meaningful learning, which in turn creates better comprehension of material, improved engagement, and the ability to stay calm and regulated at school.
